

Extreme eruption home edition

Material:

- hydrogen peroxide,
- potassium manganate (VII) (available in pharmacy),
- dishwashing liquid,
- beaker of water,
- pincers,
- flask.

Instruction:

Hydrogen peroxide is a colorless and odorless liquid, having a density slightly higher than water. Is corrosive and used as a strong oxidizing agent in the chemical industry. It is used widely in the production of a number of organic dyes, as initiating explosives in the production of peroxides such as acetone peroxide.

Pour washing liquid into a container with a narrow neck. Then carefully pour peroxide.

Foam volcano

Thursday, 04 October 2012 11:42

The vessel set on a smooth surface

Do saturated solution of potassium manganate -add a few crystals to the water.

Foam volcano

Thursday, 04 October 2012 11:42

Pour fast a small amount of potassium permanganate solution.

Foam volcano

Thursday, 04 October 2012 11:42

Stormy reaction begins, which will result in production of large quantities of foam.

Explanation:

Foam volcano

Thursday, 04 October 2012 11:42

Hydrogen peroxide is a strong oxidizing agent. It is broken down by the enzyme catalase into water and oxygen. That is why
