How to inflate a Balloon using Baking Powder and Vinegar

Material:

- a small plastic bottle
- baking powder
- vinegar
- balloon

Instruction:

First, put the baking powder into the empty bottle.

Then you have to put some vinegar inside the bottle.

Now stretch the opening of the balloon over the mouth of the plastic bottle.

You have to shake the bottle a little bit.

Expanding Balloon

Freitag, den 15. März 2013 um 13:51 Uhr

Wait now a few seconds and the balloon will get bigger and bigger!

Explanation:

The acetic acid reacts with the baking soda. Carbon dioxide is formed which expands and fills the balloon.

It is similar if you bake a cake: While the preparation of the dough and baking some small gas blister are produced through chemical reactions. They make the cake loose.
